+1 (888) 336-3734

Verdek carries a full line of **modular** and **scalable** charging solutions for highway corridors, meaning you can fit several dispensers on a small footprint, at a lower overall cost of installation.

As fleets continue to electrify, give them access to the fastest charging systems out there for peak **long distance efficiency**.

Online Monitoring

Highway-based stations can be located far from your HQ, but thanks to our charging stations' connected services, you have access to online features including remote diagnostics and usage statistics, 24/7.

Fleets Love Power Efficiency

Our dynamic DC power sharing systems ensure your smart grid can serve multiple charging sessions based on the available grid connection.

Meet Range Requirements

Fleets need to get the most out of their charging sessions, which is why Verdek offers the highest powered stations offering ranges as good as 3.1 miles per minute spent charging up, for the largest of electric buses.

VERDEK

Let us fuel your next adventure.
